Ameranth Wireless™ Expands its strong Intellectual Property Position with new Patent Awards

Recent patent awards include both “handwriting” and “voice recognition” based ordering from wireless handhelds and synchronized web/wireless reservations and waitlists.

January 18, 2006, San Diego — Ameranth Wireless - a recognized leader in wireless/web based solutions for the Hospitality Market (e.g. restaurants, hotels, sports stadiums, cruise ships and casinos) is pleased to announce that the US Patent Office has approved two new significant Ameranth patents. Patent # 6,871,325 - titled “Information Management and synchronous communication system with menu generation” was issued on March 22, 2005 and Patent # 6,982,733 - titled “Information Management and synchronous communication system with menu generation and handwriting and voice modification of orders” was issued on January 3, 2006. These broad patents add to Ameranth’s already powerful Intellectual Property position from its two prior patent awards and further protect several key aspects of Ameranth’s “cutting edge” technology.

Enabling both handwriting and voice recognition technologies to place orders e.g. food orders in restaurants and “wireless sports betting” in casinos delivers a powerful and easy to learn/use human interface and speeds the ordering processes while streamlining all aspects of the system implementation. The data synchronization aspect of the patents protects those hospitality implementations that link both web and wireless solutions to a common database. As cell phones continue to grow in computing power and become a primary entry point to databases, and as the web expands its power even more - it is easy to envision that most hospitality system deployments of reservations, wait-listing, ordering solutions will require this “total system” data synchronization. Several other Ameranth innovations are protected from the most recent patent, 6,982,733 - including linking a particular guest to an order, paging and selected wireless printing of the orders directly from the user interface of the wireless handhelds.

“These new patent awards are strategic for Ameranth - since we believe that they further secure our position of having solved the major technical obstacles that prevented widespread adoption of our wireless/web based solutions in our core markets” said Keith

McNally, Ameranth's Chief Executive Officer. "Additionally, I see it as "a natural" for restaurant servers or players placing wireless gaming wagers to simply speak directly into the microphones of the wireless devices to enter their orders" said McNally. "We have pursued an active patent and intellectual property strategy for many years and we believe that these new patents and the others in our intellectual property pipeline will preserve our leadership position in the innovative application of wireless and web synchronization solutions for years to come".
